EDUCATION

Computer Science engineering

2020 – 2025

Insat

PROFESSIONAL EXPERIENCES

Big Data ,Business intelligence and automation Intern

2025/01

Marketing Intelligence & Data Pipeline Architecture:

france

- Developed, tracked and optimized marketing campaigns by centralizing data from multiple APIs (Brevo, Google Analytics, Clarity, Search Console) into a BigQuery warehouse with Cloud Storage
- Implemented Cloud Functions for data transformation with Cloud Schedulers for automated processing
- Created dashboards with Looker Studio for real-time marketing performance monitoring

Multi-Agent System Development with n8n:

- Deployed a distributed multi-agent system in n8n using workflows for complete business process automation (business plan generation, go-to-market strategies)
- Built agents by scraping existing sources and creating structured vector store indexes
- Designed agent architecture including reasoning capabilities, context management, specialized tools, and optimized prompts

RAG Solutions & Vertex AI Integration:

- Designed an adaptive RAG agent using Google Agent Development Kit (Vertex AI) for intelligent querying of SEO documents stored in Cloud buckets
- Integrated specialized tools: document management, corpus creation, keyword search, and semantic analysis
- Deployed the solution in production via Cloud Build and Cloud Run with containerized Docker architecture

Data science Intern at TALAN

2024/06 – 2024/09

- Conducted in-depth literature reviews and evaluated state-of-the-art machine learning models, including U-Net, ResNet, and Vision Transformers, for biomarker detection accuracy and efficiency.
- Developed and rigorously tested computer vision models through comprehensive simulations and benchmarking, achieving an optimal biomarker detection accuracy of 92%.
- Designed a web-based interface integrating conversational AI to facilitate interactive data exploration and model interpretation for multidisciplinary stakeholders.
- Collaborated closely with cross-functional research teams to translate advanced generative AI techniques from research into practical, scalable solutions.

Ai Intern at SOFT PARDIGM

2023/07 – 2023/08

- Extracted text from resumes using Tesseract OCR and performed data cleaning and preprocessing.
- Annotated and labeled CV data using Label Studio for NLP model training.
- Trained and benchmarked spaCy Transformer models for semantic text mapping and information extraction.
- Developed a Flask-based API, deployed with Docker and integrated into Talentsoft software, improving extraction precision by 15%.

PERSONAL PROJECTS

Implementation of a graph-transformer architecture for image classification: graph theory / Transformer

- Combined recent advances in graph processing and transformers, better capture spatial and structural relationships within wsl image data given a small dataset
- Designed a benchmarking protocol to evaluate state of the art CNN and VIT algorithms with our model.

DevHUB: A website that simplifies project, client, and consultant management: Angular/NestJS

- Streamlined project management and client-consultant interactions. Optimized project allocation and assignment to consultants (preview available on the portfolio website).
- Analyzed test results to identify bottlenecks and inefficiencies, resulting in a 20% improvement in project assignment accuracy.

Medical Visual Question Answering (MVQA) System (research)

- Compared image encoding techniques (Resnet,VGG..)and language embedding encoding (Lstm,BERT) and fusion techniques (BAN,concatenation,multi head attention)
- compared multiple benchmarking techniques (classification , BLEU for language génération) on predicting size,color, Modality ,organ system , location,existence of abnormality
- Used multiple datasets like VQA-Med-2018 ,VQA-Med-2019 ,PathVQA

CERTIFICATS

- Supervised machine learning:regression and classification 
- Advanced Learning Algorithms
- Efficient Large Language Model (LLM) Customization 
- AWS Cloud practitioner 

LANGUAGES

- English: professional
- French :Professional
- Arabe: Native
- Spanish : Beginner
